## PATIENTVILLE EXHIBIT

The PatientVille exhibit, provided by Healthcare DENMARK, offers a unique opportunity for participants to see first-hand how integrated care supported by digital health can be implemented.

PatientVille is a living simulation that shows how digital health supports coherence in treatment for individuals with chronic conditions as they move through the health system. The exhibit includes a demonstration of the different environments in which digital health services are delivered, and illustrates their use in the prehospital sector (ambulance), the hospital, the municipality, the general practice and the patient's own home.

The PatientVille exhibit will be delivered in English with Russian interpretation throughout the first and second days of the Symposium in sessions lasting approximately 30 minutes. Be sure to visit the PatientVille exhibit to experience this unique simulation of a digital health journey!
